Abstract (en)
[origin: WO2006024401A1] Disclosed is a plumbing fixture (10) comprising an electrically actuated valve (11) by means of which a water flow that penetrates the plumbing fixture (10) can be turned on and off. A first switch (12) that is embodied as a proximity switch is used for opening the valve (11) and thus starting the water flow. The inventive plumbing fixture additionally comprises a mechanically actuated operator's element (14) which is used for regulating another function of the plumbing fixture (10), such as the water temperature or the water quantity. A second switch (15) that is used for electrically blocking the first switch (12) is assigned to the mechanically actuated operator's element (14). For this purpose, the second switch (15) is disposed so as to respond when the additional operator's element (14) is manipulated.
