Abstract (en)  
[origin: WO2006021267A1] The invention relates to a radiator, in particular for a motor vehicle, comprising at least one coolant conduit device (1), in particular a plurality of coolant conduit devices such as pipes, which is or are traversed by a coolant. The aim of the invention is to create a radiator with a greater degree of efficiency than conventional radiators. To achieve this, the coolant conduit device (1) consists of a one-piece element that comprises two halves (11, 12), which are interconnected by a bending edge (8) that runs in the longitudinal direction of the coolant conduit device (1).
