Abstract (en)
[origin: WO2006024438A1] The invention relates to an electrical connecting module (10) comprising at least one connector strip (14) for electrically connecting wires and/or cables. The connector strip (14) has at least one catch element (16) and a rigid front panel (12). This front panel (12) has at least one opening through which the connector strip (14) can be partially inserted and which is cut open in the area of the catch element (16). The connector strip (14) rests against the face of the front panel (12) via a stopping edge (15). A securing element (1) can be locked from the rear side of the front panel (12) by the connector strip (14). This securing element (1) is situated between the catch element (16) and the front panel (12), and the closed contour of the securing element (1) forms a stopping face (15) on the rear side of the front panel (12). The securing element (1) has an at least partially elastic design whereby being elastic in the area of the catch element (16). The invention also relates to a securing element (1) suitable for the electrical connecting module.
