Abstract (en)
[origin: WO2006024586A1] The invention relates to a high-voltage circuit breaker system which comprises a distribution housing supported by an insulating support housing and a circuit breaker placed on said distribution housing. The circuit breaker comprises an insulator, a switching chamber surrounded by said insulator, and detachable contacts that are received in the switching chamber. The circuit breaker can be switched by means of a switch linkage that is actuated by a drive and disposed inside the support housing and the distribution housing. At least three circuit breakers (4) are fastened on the distribution housing (3) and every circuit breaker is associated with a separate switch linkage (12, 13, 15, 16; 19, 20, 22) having a separate drive (17).
