Abstract (en)

A shoe (1) comprises a sole (2) which rolls off the ground when walking, an inner sole (5) and an upper shoe (3) section which holds the foot at the front and the heel at the back. The sole is convex over its lower section, in the longitudinal direction. The thickest point is located behind the centre of the shoe. The front half of the sole has a bending region (6) which enables the wearer to stand on his toes. The outer surface of the sole consists of a single section, and the bending region has a linkage. A deformable filler element is located between the linkage layer and the innersole, over the bending region.
