Abstract (en)

The support (1) has a suspension section (6) interposed between a section (4) to be fixed to a beam (3) and a section (5) of a bearing (5A). The suspension section is present in the form a suspension arm (7) extending under a slat (2) when the slat is inserted in the bearing. The arm has an end with a part connected to the section (4) and another part connected to the section (5), and another opposed end equipped with an elastically deformable connection (10) connected to the slat. A hardness adjusting unit (13) simultaneously acts on hardness of the section (6) and the slat.
