Abstract (en)

The device has shoe connecting elements with respective jaws (2, 12) for fixing an anterior part of a shoe and another part of the shoe arranged behind the former part to exert a control function of a glide board. A torsion spring of a shoe returns towards the glide board and is mounted on a rotation axle (21). The elements are distinct and animated in rotation with respect to each other around the axle. One of the elements is connected to the device in a zone arranged in front of a jaw (12).
