Abstract (en)  
[origin: DE102005053436B3] The machine has a cross-cutter module with a sheet stacking device arranged below a cross-cut folding knife (18), where an incoming sheet is placed on the device. A cylinder support (27) is arranged below the device, where the sheet is inserted into the support by the knife. A triple-cutter module (22) is arranged downstream to the support, and has a triple-cut folding knife (24) arranged perpendicular to the cross-cut folding knife. The triple-cutter module and the support are arranged at a pivot mounting (20) that is rotatable around 180 degrees with respect to a vertical axis (28).
