Abstract (en)

Method involves attaching of cross beam (12) which has chain hoist (14) above second fitting position (11). The chain hoist is connected with base plate (3) by bearing string (15) whereby the base plate is loosen from first fitting position (10). The base plate is lifted by chain hoist from first fitting position to second fitting position whereby the base plate is mounted in the second fitting position. An independent claim is also included for the elevator system.
