Abstract (en)  
A yarn clamp assembly of a knitting machine uses a plating knitting method to weave a fabric having a side with a loop surface or a cut pile surface, wherein the base yarn (4) of the base fabric forms two fixing loops for a wool yarn (3) forming the pile loops (30) during repeated knitting processes, so that the loop (30) of the wool yarn (3) will not be loosened easily from the base fabric due to the fixing effect of the two fixing loops.
