Abstract (en)

A wall (4) at a building is covered at the front with a layer of an attractive material (3) kept in position at a slight distance from the surface. An angle element (6) made of sheet metal is attached with its vertical segment to the wall (4) and inserted with its horizontal segment into a gap between two modules (31,32) of the cladding (3). Two u-shaped elements (7) with longitudinal slots and holes for the insertion of screws are joined to a horizontal surface (9) at the wall (4) and to complementary spaces (16) at the vertical segment of the angle element (6).
