Abstract (en)
[origin: EP1785564A2] The fitting arrangement of a window, door or suchlike, with a first and second component (2,3), has connecting means (4,5) by which at least two different positions of the one with regard to the other fitting component can be fixed. By means of the connecting means, one fitting component can be fixed perpendicularly to the frame main plane of the window or door in two different positions with regard to the other component. One fitting component may be a corner hinge carrier (3) and the other a corner hinge (2). An independent claim is included for a window, door or suchlike with a fitting arrangement according to the invention.
