Abstract (en)

A method of manufacturing an electronic component comprising an integrated circuit (1) and a core (2), includes the steps of providing the integrated circuit having at least two accessible contacts (12,14), providing the core, assembling the integrated circuit and the core together by means of an adhesive substance (4), winding a wire (30) on the core in order to produce a winding (3), bonding or soldering a first end (31) of the wire to a first one of said contacts and bonding or soldering a second end (32) of the wire to a second one of said contacts.
