Abstract (en)
[origin: EP1786067A1] An electrical connection device (10) comprises a bifurcated contact (12) to establish an electrical connection with a mating contact (14). The contact has at least two limbs, at least one web region (20) between the limbs, an electrically conductive jacket (18) that is in contact with the web region, and a jacketed region where the jacket partially surrounds the two limbs. The limbs provide contact positions for contacting the mating contact within the jacketed region.
