Abstract (en)

[origin: WO2006026874A1] The aim of the invention is to temporarily retain sheet metal strips (21 to 24) which are cut from a metal plate by a cylindrical knife-type cutting device (2). Said aim is achieved by using a holding device that magnetically and/or pneumatically grips the top face of the sheet metal strips, preferably in angular scissors, resulting in a substantially reduced adjusting effort and mechanical effort than in previously used torsion bars.
