Abstract (en)  
[origin: WO2006020258A2] The invention is directed to novel tetravalent antibodies, which are preferably bi-specific. The tetravalent bispecific antibodies can be efficiently expressed in prokaryotic and eukaryotic cells, and are useful in therapeutic and diagnostic methods. The invention further describes administration of the antibodies, either alone or in combination with antiangiogenic or anti-neoplastic drugs to inhibit tumor growth and/or angiogenesis.
