Abstract (en)
[origin: WO2006026798A1] The invention relates to a level crossing with a road traffic surface (1), which is formed from track covering elements (4, 5, 4a, 5a, 4a', 5a') mounted at the height of the rails (2, 3, 2', 3') of the track. Track covering elements (4, 5, 4a, 5a, 4a', 5a') placed on the lateral edges (8) of the road traffic surface comprise, on the top surface (9) thereof, luminous marking elements (10) that form a triangular or quadrilateral luminous marking surface (16) on each of these track covering elements. The longitudinal side (11) of this triangular shape or a long diagonal (20) of the quadrilateral shape extend in a transverse direction (7) of the respective track.
