Abstract (en)

[origin: WO2006027082A1] The invention relates to a set of components consisting of at least one glazing bar (10) and of at least two glazing bar end pieces (1) for installing in an insulating glass pane, inside of which two glass planes (8, 9) are bonded together while being held at a distance from one another by a frame-shaped spacer (7). The glazing bar end pieces (1) have means (3) for anchoring to the spacer (7) and have a mounting (5a, 5b, 6) for one end of a glazing bar (10). The invention provides that in at least one glazing bar end piece (1) per glazing bar (10), the mounting (5a, 5b, 6) is designed so that the glazing bar (10) can, with its end, be introduced transversal to the longitudinal direction (12) thereof into the mounting (5a, 5b, 6).
