Abstract (en)
[origin: WO2005043495A1] The invention relates to a device for displacing sliding elements (3) in a device for representing characters, preferably a price ticket, comprising a base part (1), openings (2) that house the sliding elements (3), a viewing surface (1a), in addition to a rear face lying opposite said surface. The sliding elements (3) are arranged so that they can be displaced from a first position, in which a front face (5) of the sliding elements (3) is visible on the viewing surface (1a) of the base part (1) into a second position, in which said front face (5) is located at a distance behind the viewing surface (1a) in the base part (1) and is essentially invisible. The inventive device is equipped with two grip bars (7, 8), which can be pressed against one another and on which setting templates (16, 17) comprising setting pins (34) that can be inserted into the openings of the base part (1) are displaceably mounted. Said setting pins (34) can be inserted into the openings (2) of the base part (1) from both sides in a substantially simultaneous manner.
