Abstract (en)

[origin: EP1787564A2] The plate (1) has a base plate (2) in which a passage opening (7) for an air flow is formed. An attachment unit (4) is connected with the base plate and detachably connects the plate with a vacuum cleaner filter bag (5) in a non-destructive manner. A deflecting unit (3) partially surrounds the opening, and is connected with the base plate. The deflecting unit is formed such it is arranged partially inside the bag after connecting the plate (1) with the bag and the air flow entering into the deflecting unit via the opening is thus deflectable. An independent claim is also included for a vacuum cleaner filter bag for connecting with a holding plate and comprising a counter attachment device.
