Abstract (en)
[origin: EP1787760A1] The device has a main housing (10), in which an electric motor (12) is placed. A handle housing (6) is movably held against the main housing in a spatial direction. A motor switch (16) is provided in the handle housing and is electrically connected with the drive motor using a wiring (14). The wiring has a foam filled protective cladding and strands that are fixed in the cladding. The strands are arranged at a distance from each other. The protective cladding is formed from a thermosetting polyurethane-foam.
