Abstract (en)
[origin: EP1787913A1] The equipment (10) has a device (20) by means of which individual information carriers(11) can be, at least partly or completely, detached from a continuously moving track (12). Information carriers (11a) that are established as non-functional are selected and removed from the detached information carriers. The remaining detached information carriers can be transferred partially or completely, again on the track for further transport.
