Abstract (en)

The yarn length measuring device includes: a means (73) that detects a yarn layer peripheral surface movement distance #PLs of a yarn layer formed by the winding yarn (4) around a winding tube (6) ; a means (74) that detects a traverse movement distance #TLs of the yarn; and a winding length computing means (75) that inputs the yarn layer peripheral surface movement distance #PLs, and the traverse movement distance #TLs, detected by the traverse movement distance computing means (74), calculates a winding length of the yarn (4) wound around the winding bobbin (6, 7) at each time (Ts) from the #TLs and the ##PLs that have been input, and determines a winding length (YL) of the yarn (4) wound around the winding bobbin (6, 7) by summing up the winding lengths # YL calculated at each predetermined time (Ts).
