Abstract (en)
The textile has continuous tracks (2, 3) that are made of an electrically conductive material deposited on a coating layer. The tracks are connected at an end by an electric bridge (4). The tracks form an electric resistance that is along a textile zone. The tracks are connected to a device (5) that is sensible to modification of the resistance formed by the tracks. The tracks define a continuous pattern forming undulations (10, 11) imbricated on each other. The undulations are remote from each other by a distance in the order of a decimeter.
