Abstract (en)
It relates to a floor with a base structure formed from a cross-linking of horizontal profiles (1 and 2) which support a set of tiles (3) that are assembled and removed vertically. It is characterised in that the base structure comprises certain primary profiles (1) with a cross-section in the form of an inverted "T" and some secondary profiles (2) of the same cross-section, which are coupled via their end sections to pairs of adjacent primary profiles, the tiles (3) being fitted via their narrow lateral faces against the slots of the profiles (1 and 2), at the same time as they rest against at least certain projecting seatings of the cross-members of said primary (1) and secondary (2) profiles.
