Abstract (en)

[origin: EP1788180A2] The method involves arranging a mounting system (8) between an outer side (4) of a building closure unit (6) and an inner side (22) of an opening (18). The mounting system is pneumatically expanded between the inner side and the outer side such that the building closure unit is fixed in the opening. The closure unit is positioned before the expansion of the mounting system. A gas-tight closure is provided between the outer side and the inner side. Independent claims are also included for the following: (1) a mounting system with which a building closure unit is installed in an opening of a building (2) a building closure unit at which a mounting system is arranged.
