Abstract (en)

The luminaire has an access flap (2) including a lamp support (3) carrying a lamp (4) and closing a passage to an optical block of the luminaire. The flap is constituted of a locking bar and is fixed in a detachable manner to the luminaire by a fixing system. The system controls the displacement of the support with respect to the passage by associating a tilting movement of the flap and a translation movement of the support. The fixing system provides a bistable position to the flap during opening of the flap.

Abstract (fr)

L'invention concerne un appareil d'éclairage dans lequel la lampe est disposée sur un support fixé de manière amovible au châssis du luminaire par un système de fixation comportant un moyen mobile de verrouillage commandant le déplacement du support par rapport à l'appareil, ledit support portant un connecteur électrique agencé pour venir en contact avec un connecteur électrique fixé sur l'appareil, tandis que ledit support est solidaire d'une trappe dans l'enveloppe extérieure de l'appareil.
