Abstract (en)
[origin: EP1788313A2] The device has telescopic extensions that are arranged at a distance from each other. Each extension has a fixed part (4) arranged in a household device and another part (5) that is movable relative to the fixed part. The movable parts are connected with a cross connection (6) using a spring unit (7) that is formed as a part of clip-connection. The spring unit is made from a plane sheet metal through deformation and is arranged on both end regions of the cross connection. An independent claim is also included for an oven e.g. cooking oven, with a pull-out device.
