Abstract (en)

[origin: EP1788544A2] The method involves disturbing the uniqueness and/or uniformity and/or homogeneity of coloration of coloration zones by the creation of supplementary coloration zones (4) at the level of a visible face of a conveyor belt (1). The supplementary coloration zones are disposed in an irregular manner so that the supplementary coloration zones accompanying the belt during running of the belt renders the movement of the belt to be perceptible to the eye.
