Abstract (en)

[origin: WO2006029797A1] A teat cup (30) and a method for bring a fluid into contact with a teat, wherein the teat cup (30) comprises a housing and a teat rubber (32) arranged inside the housing (31), separating a teat area from a pulse area, and comprising a head area (33), a shank area and an end area which communicates with a milk hose. A valve, which enables a flow connection from the teat area to a milk hose to be sealingly closed, is also provided. The head area (33) comprises at least one exit area (34) which is configured in such a way that a fluid, particularly a disinfectant, leaving the exit area (34) is directed at least partially in a radial manner towards the inside.
