Abstract (en)

[origin: WO2006029686A1] Disclosed is a method for dyeing keratinic fibers, especially human hair. According to said method, some fibers are selectively bleached by means of a tinting agent in a lightening step, whereupon the entire amount of keratinic fibers are died with the aid of a dyeing agent. Said dyeing agent contains: a) at least two initial oxidation dyes, at least one of which has to be of the developer type, or b) at least two initial oxidation dyes, at least one of which has to be a reactive carbonyl compound, as a coloring component. The inventive method makes it possible to obtain colors with well defined, natural reflexes.
