Abstract (en)  
[origin: WO2006015688A1] A container (1) suitable for packaging a product, comprising: a) a base wall (11), opposing side walls (27, 29) and opposing front (5) and rear walls (9) together defining a storage space (70) for storing the product, b) a lid (105) hingedly connected to the rear wall and comprising a top wall (7) opposed to the base wall, and one or more front and/or side lid flaps (111) depending from the top wall; c) one or more locking flaps (100) the one or more locking flaps comprising a locking portion (57) nested within a lid attachment portion (59), d) the lid attachment portion being connected to said top edge by lines of weakness (53, 55) at two points which straddle the joint (51) between the locking portion and said top edge and wherein respective adjacent (57a, 59a) of the locking portion and lid attachment portion are cut edges; e) the lid attachment portion and the locking portion are separated on first opening of the lid to tear the lines of weakness wherein reclosure of the lid procedures an audible sound by forced interengagement of the respective cut edges of the locking portion and the lid attachment portion as they return to the nested arrangement.
