Abstract (en)

[origin: WO2006027450A2] The invention relates to a container (3) closing lid (1) whose top part forms a spout (2) provided with a sliding shutter (4) driven by a spring (5) and controlled in the displacement thereof by a pivotable opening lever, wherein additional means are provided between the spout (2) and the lever for increasing the spring (5) pressure force and said lid is handled by means of a grip handle (9). The inventive lid is characterised in that at least one part of the grip handle (9), means for fixing the lid to the container (3) and means for permanently pressing the spring (5) are formed in an integral manner with the lid (1) in such a way that an accurate lid (1) having a simplified structural design is obtainable.
