Abstract (en)

[origin: WO2006024370A1] The invention relates to a method for producing polymers by dispersion polymerisation. According to said method, the aqueous monomer solution contains at least one displacer, enabling the polymer to separate from the aqueous solution during the polymerisation process. The invention also relates to water-soluble or water-swellaable compounds and to the use of the latter for thickening and/or absorbing liquids.
