Abstract (en)
[origin: WO2006077109A1] The invention relates to a sanitary outlet unit (1), comprising a outlet fitting (2), with a flow regulator (4) in the region of the water outlet (3) thereof, whereby an aeration device is provided for aeration of the water flow. Said outlet unit (1) is characterized in that the aeration device (5) is provided in the outlet fitting (2) and/or in at least one water line leading to the outlet fitting (2) separately from the flow regulator (4). By means of the spatial separation of the functions of flow shaping or water outlet and aeration of the water flow, there are many possible embodiments for optionally providing the water outlet (3) of the sanitary outlet unit (1) with an extremely thin embodiment.
