Abstract (en)
[origin: WO2006029954A1] The invention relates to a security chest (100) with a safe region (112), for accommodating value objects (1). The chest (100) comprises a protective system (114), for the protection of value objects (1), located in the safe region (112). The protective system (114) comprises at least two protection modules (114.1, 114.2), arranged in the safe region (102) and embodied to automatically block the value objects (1) from two sides in an emergency. An access opening (116) with a sliding plate (118) is provided, arranged in the region of a chest wall (104) and displaceable between the covered position and the open position thereof by a translational movement.
