Abstract (en)
[origin: WO2006000721A1] The invention relates to a device (10) for retaining two elements (1, 2) in position in relation to one another in the event of a break in the link therebetween. The invention is characterised in that (i) the retaining device (10) comprises at least one retaining loop (4) and (ii) each of the two elements (1, 2) comprises at least one means (7, 8) for anchoring the retaining loop (4).According to the invention, the retaining loop (4) extends when the link breaks.
