Abstract (en)

[origin: WO2006024529A1] The invention relates to a remote control and to a method for operating the remote control, comprising an input/output unit and at least one intermediate memory. Communications information for more than one household appliance can be stored in each intermediate memory. In order to obtain a higher versatility and universal applicability, the input/output unit, intermediate memory and the appliance to be controlled are located in the same housing.
