Abstract (en)

The device (28) has a base plate (24) and adjusting links (30) provided at respective longitudinal ends, where one of the links is articulated on the base plate through a rod (32). The rod is articulated on the base plate through a main axle (A1) and on the link through a secondary axle (A2), in which the links are arranged in a manner to slide relative to the plate. A locking device (58) permits the link to grip an anchoring element (60) that is arranged on the plate along two indexed longitudinal positions defining two lengths of strap, respectively.
