Abstract (en)

[origin: EP1790252A2] The operating device has a control and adjustment unit and a drive unit. The control and adjustment unit provides signal to the drive unit to actuate the adjusting element (2), which is a drawer, if the pressure sensor (3) is again released. The pressure sensor is arranged on the slide rail (4) of the body (1) of adjusting device so that the sensor is activated by a pressure on the front plate of the drawer.
