Abstract (en)

The device has a quick clamping device (2), a hollow shaft (14) with a bolt (18) extending in the longitudinal direction of the shaft and a window-like opening (28), in which a clamp body (30) is arranged. A tool is clamped between clamping surfaces. The clamp body is attached against the bolt and against a spring-loaded inclined plane (34) so that the bolt is clamped by the clamp body as a result of the spring loading of the inclined plane and is held in the hollow shaft.
