Abstract (en)  
The device has two supporting rollers (2, 3) that form a winding bed (4), where a winding roller (5) is arranged on the bed during winding. One of the rollers has vibration dampers (14, 15) with a resonance frequency, where the resonance frequency is adjusted to the frequency in a predetermined range below the contact resonance frequency to end the winding process between the supporting rollers and the winding roller. The resonance frequency lies above the bending resonance frequency of the supporting rollers. The dampers are formed as passive dampers.

Abstract (de)  
Es wird eine Rollenwickeleinrichtung (1) angegeben, die zwei Tragwalzen (2, 3) aufweist, die ein Wickelbett (4) bilden, in dem beim Wickeln eine Wickelrolle (5) angeordnet ist. Man möchte Probleme beim Wickeln von Materialbahnen (6) mit hohem Haftreibwert vermeiden. Hierzu ist es vorgesehen, daß mindestens eine Tragwalze (2, 3) einen Schwingungstilger (14, 15) aufweist.
