Abstract (en)
    [origin: EP1790794A2] The part has a surface (3.3) lying at a surface of a panel and designed as a guide (3.4), where the fastening part is made from a flat material. The guide extends between the panel and a substructure. The guide is arranged at a distance to edges of the fastening part with respect to the direction of the panel edge at which the fastening part is engaged. A fin (3.4.1) projects from the edges of the guide in the direction of the panel, and three holes are provided in the surface.
