Abstract (en)

[origin: DE102005037194A1] Closing cylinder (10) comprises a pin part which is prevented from unintentional movement from a sleeve and has a protrusion on its end facing away from the core. The base of the sleeve has an opening through which the pin part extends and closes with the outer side of the base on securing the pin part. A fixed stop (66) is arranged in a receiving bore (30) of a housing (12). Preferred Features: The receiving bore of the housing is closed by a closure pin on its end facing away from a receiving chamber (16).
