Abstract (en)

[origin: DE102005039821A1] The stopper has a door stopper plunger (2) with a plunger base (3) and an actuating mechanism, which has a hand operable actuating body (6), a connecting unit (8) and a spring (4). The connecting unit couples the body with the plunger, and the spring pretensions the plunger or the base downward. The plunger is selectively movable and lockable in a raised resting position, and brought into a lowered operating position, in which the plunger bar is pressed under prestressing against a ground. An independent claim is included for a door leaf with a door stopper.
