Abstract (en)
The system (1) has an evaluation module (7) connected to a monitoring module (5) for receiving statistical data and designed to evaluate the data with respect to a state of the system and output the data in the form of state data. A maintenance module (9) is connected to the module (7) for receiving state data, and is designed so that the module (9) creates maintenance instructions based on state data and outputs the state data to an output unit (11).
