Abstract (en)

[origin: WO2006032263A2] The invention relates to a device for measuring the anterior chamber of an eye, in particular, for measuring the anterior chamber diameter (7), in order to determine the size of an anterior chamber lens for implantation, comprising a measuring probe (1), which may be introduced into the anterior chamber (4) up to the edge of the chamber (5) through the limbus (3), characterised in that the measuring probe (1) comprises two measuring feelers (6), which may have the free ends thereof spread like for a gauge into opposing regions of the anterior chamber (4), preferably into opposing regions of the chamber edge (5), by means of an operating device (9).
