Abstract (en)

[origin: WO2006021291A1] The invention relates to a lid (1), in particular for food packaging such as yoghurt pots or similar, or to a label, in particular a label for the neck of a bottle. Said lid or label comprises an embossed aluminium foil or an embossed composite aluminium foil, plastic foil, composite plastic foil, paper foil or composite paper foil. The aim of the invention is to obtain suitable surface characteristics and to enable the printing of even small characters and an effective separation process. To achieve this, the embossing consists of a plurality of approximately parallel embossed lines (2). At least one embossed line is interrupted (3) and/or some sections of said line or lines have a different width and/or a different embossing depth.
