Abstract (en)

[origin: WO2006032154A1] The invention relates to a device (1), for uninterrupted winding of a continuously-fed textile material web (3), comprising four transport means (11, 21, 25, 27), forming a cage at the beginning of the winding process. The third and fourth transport means (25, 27) are moved radially away from the winding centre with increasing diameter of the roll (17) and removal of the second transport means (21).
