Abstract (en)

[origin: WO2006024188A1] The invention relates to an active noise reduction, whereby at least one input signal (25) is fed to a processor unit (18), which transmits the input signal (25) to at least one additional processor unit (19) and the at least one input signal (25) is processed to generate at least one output signal (26) in one of the at least one additional processor units (19). A processing type for the processing in the additional processor unit (19) is specified by the processor unit (18). The at least one generated output signal (26) is then supplied to the processor unit (18). The invention further relates to devices for carrying out said method.
